

TEAM PROFILE

JORG HANSEN, R.D.T.

LABORATORY MANAGER, IMPLANT SPECIALIST

As IDL's laboratory manager, Jorg's vast knowledge of all aspects relating to laboratory work have made him indispensable to dentists, prosthodontists, oral surgeons, and IDL's expert technicians.

After receiving a thorough education in Hamburg, Germany and gaining years of experience there, Jorg came to Canada and furthered his education through the CDTO and is counted among the association's membership. During his near 30 years with IDL, Jorg has been responsible for implementing many advancements to refine laboratory practices.

Jorg was among the few R.D.T.s capable of working with removables and placing attachments on crowns in Ontario during the early 1980s. The study of Implantology was a natural progression for him.

Jorg is highly qualified to assist clinicians, having observed the All-on-4 surgical technique first-hand at the Malo Clinic in Lisbon, the world's leading centre for Implantology. He regularly attends courses offered by

leaders in restorative and aesthetic dental solutions, some of which are provided through IDL's Continuing Education Centre. Jorg has also participated in numerous mentorship programs that connect the surgical, lab and restorative processes together.

There are hundreds of implant systems available which makes the process of choosing the right one for a particular restoration a daunting task. Jorg has researched a great many, tested dozens, and selected the key systems that have proven clinical success rates with predictable and positive treatment outcomes.

Jorg believes working closely with doctors on complex cases to educate, guide, and assist each step of the way benefits all involved—especially the patients. He is forever focused on delivering quality products consistently as

well as providing only the highest level of patient care.

Whether your next implant case is a single-unit, multiple-unit or full-arch restoration, Jorg is always happy to be of assistance; call IDL today.
